Hatstand wins opportunity to project manage integration of mortgage origination business

Hatstand has been selected to project manage the integration of a mortgage origination acquisition by the lending & securitisation business group within a major US investment bank. The remit will involve delivering a new data network to connect broker and packager branches throughout the UK. In addition, Hatstand will develop an expansion office and BCP facilities to support rapid business development.

This is an important appointment for Hatstand in a specialist area that is witnessing considerable growth and change. The data network design will be built upon "thin-client" technology; applications being hosted and supported centrally. This centralised control delivers significant benefits to the business; reduced risk of failure, limited broker-side maintenance and potential for rapid expansion with minimal disruption or delay.
